Static Application Security Testing (SAST) Scan Report

Project Name:	TestProj
Primary Language:	Detecting...
Scan Target:	FILE
Scan Triggered:	2026-07-09 11:25:46
Total Findings:	1

Executive Summary:

This automated report compiles security vulnerabilities, code pattern violations, and potentially exposed hardcoded secrets in the submitted repository. For each issue, standard defensive remediation details are provided. This report is intended for defensive security operations and software engineering remediation purposes.

Vulnerability Severity Statistics

CRITICAL	HIGH	MEDIUM	LOW	TOTAL
0	1	0	0	1

Detailed Security Findings

#1 SQL Injection

HIGH

File: main.py (Line 10)
Scanner: Bandit Test
Description: Concat query execution with user input <secret>

```
if a < b:  
    print(a & b)
```

Recommended Remediation: Use parameterized query

AI Security Assessment:

This is a test with an unclosed <tag and a raw & character.

AI Secure Implementation Recommendation:

```
cursor.execute('SELECT * FROM users')
```
